SUMMARY

Software Development Engineer with **3+ years** of experience building high-scale frontend systems using **React, TypeScript, and Go**. AI-native engineer who integrates **LLMs** throughout the software development lifecycle from **implementation planning** and **architecture validation** to **code generation, testing, debugging, and technical documentation** to accelerate delivery. Experienced in building scalable products, developer platforms, and **AI powered workflows**.

EXPERIENCE

Navi, Software Development Engineer - 2 (Front End) | Jan 2025 – Present

- Built an AI powered **funnel diagnostics workflow** that analyzed user clickstreams to identify drop-off points, bucket users by abandonment patterns, measure step-to-step latency, and automatically surface conversion bottlenecks for faster root cause analysis.
- Leveraged AI across the software development lifecycle to transform PRDs into implementation plans, validate architecture, generate production-ready code, author test suites and design documents, and accelerate debugging through iterative context-driven analysis while maintaining ownership of engineering decisions and code quality.
- Engineered a modular Ads Web SDK (React, TypeScript), reducing partner onboarding effort by **60%** through a **plug-and-play architecture**.
- Diagnosed a critical UX bottleneck involving browser pop-up blockers; orchestrated a synchronous redesign that recovered **Rs.73Cr/month in revenue**.
- Strengthened Content Security Policy (CSP) by eliminating **unsafe-inline and unsafe-eval**, mitigating XSS risks across personal loan funnels.
- Localized user journeys for vernacular support, accelerating regional conversion rates by **15%+**.

Navi, Software Development Engineer (Front End) | Jul 2023 – Jan 2025

- Operationalized an end-to-end testing platform for regression and performance stability across 10+ critical flows.
- Automated performance reporting via custom dashboards, saving **40–48 hours/week** of manual data entry.
- Delivered a **React Flow**-based visual debugger, slashing on-call resolution time by **80–90%**.
- Spearheaded** a self-serve platform for configurable flow creation, reducing engineering overhead by 60% and eliminating 90% of redundant development work.

Neurobit, Front End Intern | Nov 2022 – Feb 2023

- Crafted an end-to-end mobile feature using React Native, supporting 5,000+ users at launch.
- Refactored API integration and Redux state management to reduce average load time by **30%**.

PROJECTS

[Clipify](#)

- Built an AI-powered Chrome Extension using **React, TypeScript, and Manifest V3**, reducing text editing time by ~70% through one-click AI transformations.
- Developed a Go (Fiber) backend on Google Cloud Run with PostgreSQL and Redis, serving 1,000+ AI requests/day with low-latency responses.
- Implemented Google OAuth, JWT authentication, and Redis-based quota management, supporting 500+ users.

EDUCATION

Netaji Subhas University of Technology, New Delhi | Jul 2019 – Jun 2023

B.Tech, Computer Engineering | GPA: 7.33

TECHNICAL SKILLS

- Languages:** JavaScript, TypeScript, HTML, CSS, Go
- Technologies:** React, React Native, Next.js, Node.js, Redux, Jest, AWS, Docker, LLM, Cursor

ACHIEVEMENTS

- Solved 600+ DSA problems across LeetCode, GeeksForGeeks, and CodeStudio.
- Completed 200+ problems on [InterviewBit](#).
